More for Your Money

With the N-able Backup Data Protection Plan

Thank you for your interest in the N-able™ Backup Data Protection Plan (DPP). This program complements our standard product licensing options by allowing you to pay one monthly fee and receive:

- **Expanded fair use policy** for your server, workstation, and document backups

- Up to **1,000 licenses** of N-able Backup Documents

- The option to license N-able Backup for virtual servers at a **new, lower price**

FREE USE OF BACKUP DOCUMENTS

While most business owners understand the need for server backup, and are often willing to pay for backups of their most critical workstations, you may have some customers with tighter budgets. For these customers, or for other customers' less critical workstations, Backup Documents is a great solution.

Backup Documents requires no configuration. It's a lightweight, automated way to protect business documents on laptops or workstations. Backups are run twice a day, and automatically retained for 28 days, giving you up to 56 restore points. With Backup Documents, the system state is not backed up, but files, including Microsoft 365™, QuickBooks®, and Visio®, are found and backed up, no matter where they are located on the workstation. A full list of supported file types is available here.

When you add DPP, the usual Backup Documents price of $1 USD per workstation is waived for the first 1,000 devices. You'll be ready to save the day when a critical document is lost or corrupted—at no cost to you.

EXPANDED FAIR USE POLICY

N-able Backup licenses have always included backup storage in our worldwide, private cloud, as defined in our Fair Use Policy. When you add DPP, the limits of this policy are expanded by more than four times—to 2 TB per physical or virtual server and 500 GB per workstation.

VIRTUAL SERVER BACKUP

N-able Backup lets you protect and recover both physical and virtual servers, including VMware vSphere® and Microsoft® Hyper-V® virtual machines. With DPP, any virtual servers you back up will be billed at a lower rate than physical servers, making it easier to choose guest-level backup and gain a better recovery experience. If you have a highly virtualized environment, the savings can add up.

To learn more about how the **Data Protection Plan** can benefit you, please consult your **N-able account manager.**

Fair Use cloud storage, under the Data Protection Plan, governed by our Fair Use Policy, is 2 TB per physical or virtual server, and 500 GB per workstation selected size. The data storage pool for Microsoft 365™ data is separate and is unaffected by this program.
